

Lab Exercise – 3/24 & 3/25

For this lab exercise, your assignment is to write an *encapsulated* object corresponding to a traditional bank account. Consider reasonable constraints for this object, taking note of any details mentioned below into mind. Name your code file “Account.”

- Fields
 - Your object should contain one `double` field named “`balance`”.
- Methods
 - `void withdraw(double amt)` – withdraws money from the Account.
 - `void deposit(double amt)` – deposits money into the Account.
- Constructor
 - Your constructor should take in an initial balance for the Account.
